

422 - TEXTILE PROTECTOR

TECHNICAL DATA SHEET | NORDICARE

Textile care

TEXTILE PROTECTOR is a protection product developed for many different types of textiles. It is well suited for new and newly cleaned fabrics, where a protective treatment is desired to help maintain the textile surface during everyday use.

Key Benefits

- Cleans and refreshes suitable textile surfaces.
- Helps remove common stains from carpets, furniture and clothing.
- Contains antistatic detergent to help reduce re-soiling.
- Can be used for both general surface cleaning and targeted stain removal.
- Long working time supports treatment of difficult stains.

Application area

For carpets, furniture upholstery, clothing and other textile surfaces that tolerate moisture. Do not use on textiles or microfibre materials labelled as not tolerating moisture. Always test for possible discoloration on a small, less visible area before treatment.

Instructions

Cleaning: Vacuum the surface thoroughly. Spray TEXTILE CLEANER generously on the area and treat the entire surface from seam to seam to avoid marks or discoloration. Allow to dry, then vacuum.

Stain removal: Absorb as much liquid as possible with a clean cloth. Spray the entire surface and apply extra product on the stain. For difficult stains, allow 8-12 hours working time and cover the area with plastic to keep the stain moist. Repeat if necessary, allowing the fabric to dry between treatments.

Conditioning

500 ml (12 units/box)

Document control

Document no.: TDS-421

Product: Textile Cleaner

Version: 01

Revision date: 20.07.2026

Prepared by: Technical Department

Declaration

Contains: 5% anionic surfactant, <5% oxygen-based bleach (hydrogen peroxide), water and perfumes.

Safety information

Keep out of reach of children.
